Cross-reference to related applications

This application claims priority to Swedish patent application 0400878-5 filed 1 April 2004 and is the national phase under 35 U.S.C. § 371 of PCT/SE2005/000441.

Page 7, first paragraph:

The object is also achieved by the device initially defined, which is characterised in that the control unit is adapted to control the actuator device, with regard to the sensor signal, to act on the vehicle in such a way that a desired vibration character in the steering wheel is obtained. Such a device, which includes the support structure and the steering wheel, constitutes an essential component that can be provided and mounted in substantially all motor vehicles available on the market during the manufacturing of the vehicle, or as auxiliary equipment to be mounted afterwards. ~~Advantageous embodiments of this device are defined in the dependent claims 2 to 18.~~

Page 7, second paragraph:

The object is also achieved by the motor vehicle initially defined, which is characterised in that the control unit is adapted to control the actuator device, with regard to the sensor signal, to act on the vehicle in such a way that a desired vibration character in the steering wheel is obtained. Advantageous embodiments of this motor vehicle is obtained by means of the features of the device, ~~which are defined in the dependent claims 2 to 18.~~
